DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Robert P. Michal on 11/10/05.

The application has been amended as follows:

In Claim 1, at line 40, delete "a mechanism" and insert therein --an additional means--

Allowable Subject Matter

Claims 1-7 are allowed.

The following is an examiner's statement of reasons for allowance: claim 1 contains allowable subject matter for at least the reason that the prior art of record fails to teach or reasonably suggest an X-ray diffraction apparatus comprising an incident optical system, a sample support mechanism, a receiving optical system and receiving optical system rotating means, the sample support mechanism comprising an attitude controlling means, first and second incident angle controlling means and an additional means for rotating a sample around two axes of rotation which are orthogonal to each other and pass on the surface of the sample as claimed. While Zheng ("Status of the 4W1C...") teaches a support stand that can adjust an attitude and a first incidence angle,

Art Unit: 2882

Zheng fails to specifically teach a second attitude adjustment around a first axis of rotation while a sample is in a second attitude as claimed. While Lentfer teaches mounting an attitude adjusting portion (20) to a table rotating a in an Omega direction (around a first axis), the combination of the table of Lentfer with the 5-circle diffractometer of Zheng is not readily obvious, since the diffractometer of Zheng is already an adaptation on a Huber 4-circle goniometer, which appears fixed in location from a source. The additional rotation was not included or suggested by Zheng. Lentfer, while including a rotation around a first axis while a sample is in a second attitude, fails to teach or suggest an additional means for rotating a sample around two axes of rotation which are orthogonal to each other and pass on the surface of the sample as claimed. Lentfer desires the dynamic holding of the sample at a particular point (Paragraphs 23 and 45), which is achieved without the additional means of rotation.

Claims 2-7 contain allowable subject matter at least by virtue of their dependency.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Krystyna Suchecki whose telephone number is (571) 272-2495. The examiner can normally be reached on M-F, 9-5.
